PLEASE NOTE

Recipes in this book call for double-acting baking powder. If single-acting powder is used, 1 teaspoon of single-acting baking powder equals $\frac{3}{4}$ teaspoon of double-acting baking powder.

BAKING INGREDIENT HINTS

- 1 square (1 ounce) unsweetened chocolate = 3 tablespoons cocoa
- 1 cup sifted all-purpose flour = 1 cup plus 2 tablespoons sifted cake flour
- 1 cup sifted cake flour = 1 cup minus 2 tablespoons sifted all-purpose flour
- 2 tablespoons flour (for thickening) = 1 tablespoon corn-starch
- 1 cup egg whites = 8 to 10 egg whites
- 1 cup egg yolks = 12 to 14 egg yolks
- 1 cup sweet milk = 1 cup sour milk plus 1 teaspoon soda
- 1 cup sour milk = 1 tablespoon vinegar and fill cup with sweet milk
- 1 teaspoon baking powder (for leavening) = $\frac{1}{4}$ teaspoon soda and $\frac{1}{2}$ teaspoon cream of tartar
- 3 teaspoons double acting baking powder = 4 teaspoons single acting baking powder

Note: Variations in gluten content of brands of all-purpose flours make it impractical to make adjustments or substitutions to recipes. So, follow directions in recipe.

If a soft wheat pastry or cake flour is used, an adjustment must be made in amount of shortening and water.

If a self-rising flour is used omit salt and baking powder.

Drain well over kettle, then place on tray covered with absorbent paper.

Frying Temperature: 350° F. **Frying Time:** 5 to 6 minutes.

ACCURATE MEASUREMENTS ARE IMPORTANT

Use standard measuring cups and spoons.

Sift **flour** once before measuring. Put sifted flour lightly into measuring cup by spoonfuls. Do not press flour into cup, or tap it down. Level off top of flour with edge of spatula.

Sift **sugar** if it is lumpy.

Pack **brown sugar** down tightly when measuring. Should hold its shape when turned out.

Spices, salt, and other dry ingredients should be heaped in measuring spoons and then leveled off with a straight edge.

Liquids should be measured in a glass measuring cup which has extra space at top to prevent spilling. Be sure cup is on level area and that you read the measurement at eye level.

Swift'ning may be packed solidly into unit measuring cups and spoons. Or, fill cup with fractional readings with water to point that will total 1 cup when the specified amount of Swift'ning is added. Then put in Swift'ning until water reaches the 1 cup marking.

MEASUREMENT OF INGREDIENTS

3 teaspoons = 1 tablespoon

$3\frac{1}{2}$ cups confectioners sugar = 1 pound

SWIFT'NING

The New Improved Shortening

Finer Cakes: Swift'ning contains a wonder-working "quick mix" ingredient. This wholly new kind of shortening is ideal for all types of cakes. Gives perfect results with either quick mix or conventional type recipes.

Flakier Pies: Tests prove that snow-white Swift'ning makes flakier pastry than other types of shortenings.

Melt-in-Mouth Fried Foods: Swift'ning is tasteless, odorless and more digestible (no other shortening is more digestible); contains important nutritional essentials in greater quantity than shortenings of other types.

Keeps Without Refrigeration: Keeps fresh right on your pantry shelf.
